

What is the Coral Triangle Initiative Monitoring and Evaluation Working Group?

The Monitoring and Evaluation Working Group (MEWG) has been supporting the Coral Triangle Initiative on Coral Reefs, Fisheries and Food Security (CTI-CFF) since its inception and has grown into a functioning body to support monitoring the success of the progress towards the five goals of the CTI-CFF Regional Plan of Action (RPOA)

Who is in the MEWG?

The MEWG is composed of at least two representatives from each of the CT6 (Indonesia, Malaysia, Papua New Guinea, Philippines, Solomon Islands and Timor-Leste), a representative from the Regional Secretariat and CTI-CFF partners. Decisions are made by the CT6 members.

The MEWG also asks for support from external participants such as experts or facilitators.

What does the MEWG do?

The primary function of the MEWG is to develop the Monitoring and Evaluation System and provide technical inputs and recommendations to the Regional Secretariat and the National Coordinating Committees of the CT6. It has formulated the indicators and system for tracking these in the over arching goals that have been set forth in the RPOA.

What is M&E?

When you hear "There are 6,291km² of coral reefs in MPAs in Indonesia" or "More than 85 percent of reefs within the Coral Triangle Region are currently threatened by local stressors", do you wonder how people know this?

These types of statistics and other similar information result from "monitoring and evaluation" or "M&E" efforts. M&E is the process by which data are collected and analyzed in order to provide information to policy makers and others for use in program planning and project management.

Monitoring of a program involves the collection of data that measure progress toward achieving program objectives. It is used to track changes in program performance over time. Its purpose is to permit stakeholders to make informed decisions regarding the effectiveness of programs and the efficient use of resources.

Evaluation measures how well the program activities have met expected objectives and/or the extent to which changes in outcomes can be attributed to the program or intervention. The difference in the outcome of interest between having or not having the program or intervention is known as its "impact".

Indicators are clues, signs or markers that measure one aspect of a program and show how close a program is to its desired path and outcomes. They are used to provide benchmarks for demonstrating the achievements of a program.

Data sources are sources of information used to collect the data needed to calculate the indicators. Throughout the data collection process it is essential that data quality be monitored and maintained. Data quality is important to consider when determining the usefulness of various data sources; the data collected are most useful when they are of the highest quality.

Monitoring is sometimes referred to as process evaluation because it focuses on the implementation process and asks key questions:

- How well has the program been implemented?
- How much does implementation vary from site to site?
- Did the program benefit the intended outcome? At what cost?

Did you know?

One rule of thumb is that 5-10% of a project budget should be allocated for M&E

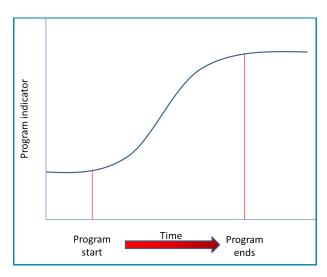

Fig 3. Monitoring: increase in program indicators

- is an ongoing, continuous process
- requires the collection of data at multiple points throughout the program cycle, including at the beginning to provide a baseline
- can be used to determine if activities need adjustment during the intervention to improve desired outcomes.

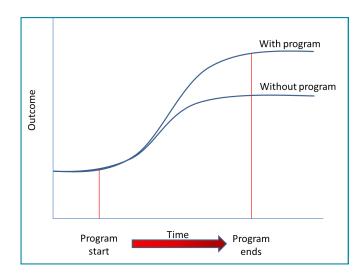

Fig4. Evaluation: increase in outcome

- requires data collection at the start of a program (to provide a baseline) and again at the end
- requires a baseline in order to measure whether the changes in outcomes can be attributed to the program
- requires a well-planned study design.

What is an M&E framework?

An "M&E framework," provides a streamlined linear interpretation of a project's planned use of resources and its desired ends.

Frameworks have five essential components:

inputs – the resources invested in a program

processes - the activities carried out to achieve the program's objectives;

outputs - the immediate results achieved at the program level through the execution of activities;

outcomes - the set of short-term or intermediate results at the population level achieved by the program through the execution of activities; and

impacts – the long-term effects, or end results, of the program.

Impact: Improvement in the affordability, availability and quality and safety of food coming from coastal and marine resources **Higher level outcome 1:** Higher level outcome 2: Coral reef ecosystem Fish stocks improved and integrity and services sustained maintained Outcome Outcome Output **Priority Endangered** CCA **MPAs EAFM** Seascapes **Species**

Most indicators to monitor the IMPACT are embedded in RPOA outcomes.

Two higher level outcomes are measured by RPOA indicators and additional outcome indicators

Output and Outcome indicators roll into higher outcome indicators

RPOA Output and Outcome indicator allow to monitor the process and evaluate the impact

Each goal has a set of indicators according to the RPOA targets (outputs) and RPOA goals (outcomes)

Food Security Improvement in the affordability, availability and quality and safety of

Goal 3: Marine Protected areas established and effectively managed

Graph 4. Details of the Strategies, Higher Level Outcomes and Impact of the CTI-CFF logic model.

Impact food coming from coastal and marine resources Higher level Coral reef ecosystem integrity and services maintained indicators outcome Condition of coral reefs Extent of mangroves and seagrass Fish biomass Graph 3: Example of a logic model from the RPOA, MPA 3.1.2 Percent/Area of total marine habitat are in marine protected or Outcome managed area 3.1.3 Percent/area of each major marine and coastal habitat type in strictly protected "no-take replenishment zones" 3.1.1 CTMPAs Framework developed and adopted by CT6 3.1.5 Percent/Area of marine protected/ managed areas included in **CTMPAs** Goals

Monitoring and Evaluation System

Monitoring and Evaluation system, including mode of reporting, adaptive management loop and Coral Triangle Atlas as a mechanism to report spatial data. Is shown in Fig. 5. The M&E framework clarifies the relationships among the CTI entities in the region.

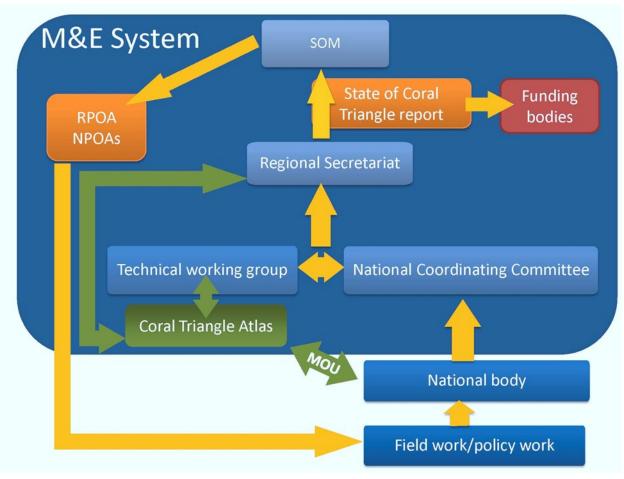

Fig 5. Measures and Evaluation System Coordination Framework

The role of RPOA and NPOAs:

The regional and national plans of action describe the activities under each objective and goal to achieve the desired result. These plans are verified by using the indicators adopted by the M&E system. The RPOA and NPOAs are thus guided by feedback from the M&E system and adapted accordingly based on their results.

The role of the Coral Triangle Atlas

The Coral Triangle Atlas is a regional database and a key resource for the source of data for certain indicators, particularly those that should be measured spatially. It provides data that will eliminate bias that may arise from using multiple data sources. It can also be relied on to perform some of the analysis of indicators status.

The role of the State of the Coral Triangle Report

The State of the Coral Triangle Report is a summary of the state of marine resources as well as socio-economic measures for each country. This report is essential to establish baselines for the evaluation process and will help us define what IMPACT the project has through

the M&E system on resources and communities.
