

Hey,
I had to look really hard for this coral trout, locally known as Sunoh, during my dives in Sabah. What a pity the wild population is at risk of extinction! Please save them by removing them from your menu.

Hey,
I had to look really hard for this humphead wrasse, locally known as mameng, during my dives in Sabah. What a pity that the wild population is at risk of extinction! Please save them by removing them from your menu.

Hey!

Just three steps to save our reef fish:

- 1. Demand to know where and how your reef fish is caught*
- 2. Avoid consuming juvenile (undersized) fish*
- 3. Simply ask for farmed fish or other non-endangered reef fish*

Cheers!
